1. Preface

Many organizations still rely on manual or semi-manual processes for handling employee expenses, approvals, reimbursements, and financial verification. These traditional approaches often result in processing delays, data entry errors, lack of transparency, and difficulty in maintaining accurate and traceable audit trails.

The **Expense, Reconciliation and Compliance Management System** provides a centralized platform that automates the entire expense lifecycle including expense submission, intelligent validation, approval workflows, policy enforcement, payment processing, reconciliation, and audit logging.

The system enhances traditional expense management by incorporating automated validation mechanisms such as receipt data extraction, duplicate detection, and risk-based evaluation of expenses. These capabilities assist organizations in improving accuracy, reducing manual verification efforts, and strengthening compliance controls.

This document is intended for faculty members, evaluators, and student developers. It defines the functional and non-functional requirements of the system and serves as a reference for system analysis, design, and implementation.

2. Introduction

2.1 Purpose of the System

The purpose of the Expense, Reconciliation and Compliance Management System is to provide an automated platform that manages the complete lifecycle of organizational expenses.

The system aims to:

- Automate employee expense submission and approval processes
- Ensure expenses comply with organizational spending policies
- Assist in validating expense claims using automated verification mechanisms
- Support accurate payment processing and financial reconciliation
- Maintain transparent and auditable financial records for organizations

2.2 Need for the System

Many organizations face operational challenges due to inefficient and manual expense management processes.

The system addresses the following needs:

- Manual expense handling is time-consuming and prone to errors
- Detecting duplicate or fraudulent expense claims is difficult without automated validation
- Tracking approval status and payment progress can be inefficient in traditional systems
- Organizations require strong compliance mechanisms for financial governance
- Financial reconciliation between internal expense records and bank transactions must be accurate
- Audit trails are required to ensure transparency and accountability

The system provides an integrated solution that streamlines expense submission, approval workflows, payment processing, reconciliation, and compliance monitoring.

2.3 System Overview

The system enables organizations to manage employee expenses through a structured and configurable workflow.

Key capabilities include:

- Expense submission with receipt uploads
- Automated receipt data extraction and validation using OCR techniques
- Detection of duplicate invoices and repeated expense claims
- Policy-based validation of expense submissions
- Risk-based evaluation to assist in identifying suspicious or non-compliant expenses
- Multi-level approval workflow based on organizational structure

- Finance processing and payment execution
- Reconciliation of internal expense records with bank transaction data
- Comprehensive audit logging for compliance monitoring
- The system supports configurable organizational workflows through role-based configuration.
- Each organization can enable or disable specific system roles depending on its operational structure.
- For example, smaller organizations may operate with fewer roles, while larger organizations may enable additional roles such as Compliance Officer.
- Certain roles such as Expense Submitter and Configuration Manager remain mandatory to ensure system operation.

2.4 Interaction With Other Systems

The system interacts with external and internal components as part of its operation.

- The system interacts with an **external banking system** for payment execution and transaction confirmation.
- The system stores and manages expense records, policies, and audit logs in an **internal database system**.
- Payment execution results and transaction identifiers are received from the bank system.
- Bank transaction records are used for reconciliation with internal expense records.

2.5 Objectives of the System

The primary objectives of the system are:

- Provide structured management of the organizational expense lifecycle
- Reduce manual verification and processing effort
- Improve financial transparency and traceability
- Enforce organizational spending policies automatically

- Support accurate reconciliation between internal records and bank transactions
- Maintain reliable audit logs for financial accountability and compliance

3. Glossary

Term	Meaning
Expense	A business-related cost paid by an employee that needs to be paid back by the company.
Reconciliation	Matching the company's internal expense records with the bank statements to make sure the payment was actually made
Compliance	Ensuring that expense submissions follow the organization's financial policies, limits, and regulatory requirements.
Audit Log	A secure record of all important system activities including user actions, approvals, configuration changes, and payment processing events.
Expense Submitter	A person in organization who submits expenses
Manager	The supervisor who reviews and approves employee's expense requests.
Finance Officer	The finance department representative responsible for processing payments and performing reconciliation.
Compliance Officer	The person who sets the rules and limits for spending to prevent fraud.
Configuration Manager	The admin who manages user accounts and general system settings and also updates the policies given by the Compliance Officer.
OCR (Optical Character Recognition)	The automated extraction of structured information from uploaded receipt images using Optical Character Recognition.
Risk Score	A numerical value representing the likelihood that an expense may violate policies or require additional review

Duplicate Detection	The process of identifying repeated expense submissions using invoice numbers or receipt similarity checks.
Multi-Tenant System	A system architecture where multiple organizations use the same platform while keeping their data isolated using unique organization identifiers.
Role Configuration	The ability for an organization to enable or disable predefined system roles based on its operational requirements.
Cross Validation	The process of comparing user-entered expense information with data extracted from receipts to detect inconsistencies.

4. User Requirements

The system shall support the following user capabilities:

- Expense submitters shall be able to create and submit expense claims with receipts and supporting details
- Users shall be able to track the status of submitted expenses throughout the approval lifecycle
- Managers shall be able to review expense requests and approve, reject, or request clarification
- Finance officers shall be able to verify approved expenses and initiate payment processing
- Compliance officers shall be able to define and maintain organizational expense policies
- Configuration managers shall be able to manage system users, roles, and configuration settings and also help in role configuration
- The system shall assist users by automatically validating expense submissions and highlighting potential issues

5. System Requirements

5.1 Functional Requirements

Authentication

- **FR-1**
The system shall authenticate users using Organization ID, User ID, and password.
- **FR-2**
The system shall restrict system access based on role-based access control.
- **FR-3**
The system shall securely store user passwords using a hashed password mechanism.

Expense Management

- **FR-4**
The system shall allow expense submitters to submit expenses with mandatory information including category, amount, date, description, and receipt when required.
- **FR-5**
The system shall validate expense submissions for completeness and policy applicability before processing them.
- **FR-6**
The system shall process uploaded receipts to extract relevant information such as vendor name, invoice number, date, and amount.
- **FR-7**
The system shall compare extracted receipt data with user-entered information to identify inconsistencies.
- **FR-8**
The system shall detect potential duplicate expense submissions using invoice identifiers and receipt comparisons.
- **FR-9**
The system shall compute a risk score for submitted expenses based on validation results and detected anomalies.

Approval Workflow

- **FR-10**
The system shall route submitted expenses to the appropriate reporting manager for review.
- **FR-11**
Managers shall be able to approve, reject, or request clarification for submitted expenses.
- **FR-12**
The system shall record approval or rejection decisions along with timestamps and user identifiers.
- **FR-13**
The system shall escalate high-risk or policy-violating expenses to the compliance officer for additional review when applicable.

Payment and Reconciliation

- **FR-14**
The system shall allow finance officers to process approved expenses and initiate payment requests.
- **FR-15**
The system shall communicate with the external bank system to execute payment transactions.
- **FR-16**
The system shall receive transaction confirmation and reference identifiers from the bank system.
- **FR-17**
The system shall perform reconciliation between internal expense records and bank transaction data.
- **FR-18**
The system shall identify and flag discrepancies detected during reconciliation.

Compliance and Audit

- **FR-19**
The system shall enforce organizational expense policies during expense validation.
- **FR-20**
The system shall maintain immutable audit logs recording all significant system

and user actions.

- **FR-21**

The system shall allow compliance officers to review audit logs and generate compliance reports.

Role and Configuration Management

- **FR-22**

The system shall allow the Configuration Manager to enable or disable predefined roles for an organization.

- **FR-23**

The system shall ensure that Expense Submitter and Configuration Manager roles remain mandatory and cannot be disabled.

- **FR-24**

The system shall allow a single user to be assigned multiple roles within an organization.

- **FR-25**

The system shall adapt the approval workflow based on the roles enabled for the organization.

5.2 Non-Functional Requirements

5.2.1 Performance Requirements

- The system shall support concurrent access by multiple users within an organization.
- The system shall process expense submissions within acceptable response times.
- The system shall handle increasing organizational data volumes without significant degradation in performance.

5.2.2 Security Requirements

- The system shall require authentication before granting access to any system functionality.
- The system shall enforce role-based authorization to restrict access to sensitive operations.

- The system shall protect sensitive data such as passwords using secure hashing mechanisms.
- The system shall ensure that audit logs cannot be modified by unauthorized users.

5.2.3 Reliability and Availability Requirements

- The system shall prevent duplicate payment transactions.
- The system shall handle payment failures without causing data inconsistency.
- The system shall ensure that expense records remain consistent even during system interruptions.

5.2.4 Usability Requirements

- The system shall provide clear feedback messages for user actions such as submissions, approvals, and errors.
- The system shall present error messages that are understandable to non-technical users.
- The system shall allow users to easily track the status of their expense submissions.

6. System Models

The following models are used to describe system behavior:

- Use case Diagram
- Activity Diagrams
- Sequence Diagram

Use Case Diagram

EXPENSE RECONCILIATION AND COMPLIANCE MANAGMENT

1.Expense Submitter:

Activity Diagrams

Expense Submitter : Track Expense Status

2.Manager: Manager - Review and Approval

3. Finance Officer:
**Finance Officer : Payment
processing Flow**

Finance Officer : Reconciliation Flow

4.External Bank

External Bank (Execute & Report)

5.Compliance Officer

Define and Update Expense Policies - Compliance Officer

Review Audit Logs and Initiate Action - Compliance Officer

6.Configuration Manager:

Configuration Manager: Manage Users & Roles

Configuration Manager: Configure Rules

Configuration Manager: Maintain System Settings
